Our lineup of 2-stroke engines now includes the brand-new 600 EFI (Electronic Fuel Injection) engine. Reliable, affordable and easy to use, it's an entry-level engine that far exceeds what you thought an entry-level engine had to be.

With the E-TEC engine lineup you also get:

ROTAX ACE™ 4-STROKE ENGINES

With the Advanced Combustion Efficiency (ACE) family of engines, BRP engineers optimized the combustion system, reduced mechanical friction, and freed intake and exhaust breathing. The result is the most efficient engine in snowmobiling. Not only are they efficient, they're a pleasure to operate and own. Very little maintenance is required; they run smoothly and produce a nice, solid – yet quiet – sound.

ACE engines are the best-selling 4-stroke engines in snowmobiling.[4]

INTELLIGENT THROTTLE CONTROL

Standard on the ACE engines, the iTC™ system delivers a whole different snowmobiling experience.

- **Driving Modes:** A button on the console enables you to select one of three driving modes. Standard mode ensures a smooth start and linear acceleration; Sport enables full performance and quicker acceleration; ECO® limits top speed and acceleration rates for a more relaxed, fuel-conserving ride.
- **Finger Throttle:** The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

1 Observed metric horsepower based on internal dyno test performed in optimal conditions.
2 Data based on internal engineering trail testing.
3 Data based on internal engineering trail testing in ECO mode.
4 Based on retail sale results as of December 31, 2019.

// SKIS

Skis make all the difference in getting your sled to handle just how you like. We offer eight different styles of skis for you to choose from. Which one is right for you? Here are some tips on choosing the right one:

PLATFORMS: REV GEN4 / XP / XR / XU / XS / XM / REV				
TOURING			**PILOT 5.7 SL** 2 carbides/ski	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
UTILITY			**PILOT 7.4** 1 carbide/ski	• Specifically designed for utility purposes. • Deeper keels allow more control while towing. • Increased tip-up rear end for better reverse capability. • 1 inch wider than Pilot DS-2 for improved flotation in deep snow. • More aggressive cornering while keeping a light steering feeling.
TRAIL SPORT			**PILOT 5.7** 1 or 2 carbides/ski****	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
			**PILOT TS ADJUSTABLE** 1 carbide/ski	• The industry's first and only adjustable ski. • The Pilot TS skis allow riders to change ski bite for changing snow conditions or riding styles easily and quickly. • With the Pilot TS skis you dial in the perfect setting by turning a knob on the ski leg. • The ski runner has ½" (12.5 mm) of travel up and down. • The thin runner and square keel design work together to eliminate darting.
			PILOT X 1 carbide/ski	• Completely redesigned from Pilot 5.7 with a new structural topside for 10% more rigidity. • 31 mm longer keel with a new shape reduces darting. • Adds 10% more lateral surface area and blends more smoothly with a new carbide. • 11° degree reduction in approach angle.
			**PILOT TX** 1 carbide/ski	• Improved to better match the REV Gen4 features. • Redesigned top side for increased rigidity. • 20 mm shorter overall length and more dramatic tip-up at the rear. • 63 mm longer runner plate increases lateral surface for more effective cornering. • Smoother front approach angle to reduce darting even further.
TRAIL PERFORMANCE			**PILOT R** 1 carbide/ski	• Straight from the MXZ X 600RS race sled. • Very aggressive profile for sharp handling. • Lightweight with high rigidity. • Proven on the ISOC race circuit.
DEEP SNOW			**PILOT DS**** 1 carbide/ski	• Designed specifically for deep snow riding. • Works well in many off-trail applications from utility sleds to mountain sleds. • Thin edge is effective for grabbing side hills.
			**PILOT DS-2** 1 carbide/ski	• Evolution of the DS with a deeper and shorter keel. • Increased agility and less effort than the original. • Great all-around ski for deep snow use. • Standard on mountain sleds with 2.5" lug tracks and utility sleds.
			**PILOT DS-3**** 1 carbide/ski **PILOT DS-3 REV Gen4***** 1 carbide/ski	• Deep snow ski designed to match the latest 3" lug and longer tracks. • 0.47" (12 mm) deeper keel than DS-2. • Works well for aggressive riders using the biggest tracks.
			**PILOT DS-4** 1 carbide/ski	• 2-stage keel design improves flotation. • Entire keel has been moved forward with a revised rear portion for improved consistency in deep snow and straighter tracking in rough conditions.

***Does not fit REV Gen4. ***Fits only REV Gen4. ****Second carbide can be added to ski by drilling marked additional holes.*
Note: The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking.

**While supplies last.*

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers and on approved pre-patterned tracks only. These tracks come standard on most 2022 Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operators Guide for more details.

SYMPATEX KEY TECHNOLOGIES

sympatex®

// PERFORMANCE

Re>Think Performance - Dynamic Breathability

In contrast to other membrane technologies, the poreless compact Sympatex membrane is based on a physical and chemical principle. The water-attracting (hydrophilic) part of the membrane absorbs the moisture from the body and emits it to the outside by evaporation. The water vapour molecules are transported outwards along the hydrophilic molecular chains. The molecular structure (hydrophilic components) of the Sympatex membrane swells in moisture and therefore provides space for water vapour transport and fast evaporation.

It also has mesh panels at the bottom to evacuate water. For optimal performance, wear the Vasa jacket and pants together or wear the new Vasa + jacket alone.

Key technologies

SELF LEVELING

Strategically placed Exofloat panels help assist you in self leveling to the surface

EXIT ASSIST

Mesh drainage to ensure you are not weighed down by the water that can inhibit exit

FLOAT ASSIST

For more than 30 minutes (*rider must exit within this timeframe to avoid hypothermia)

*This is not a coast guard approved personal flotation device, this is a flotation assistance technology. We do not recommend riders to drive over unsafe frozen bodies of water.
